

Biofreeze Products

Tube or Pump Bottles

Biofreeze Pain Relieving Gel applied from a tube or pump bottle affords the doctor the opportunity to create a more thorough application by massaging the effected area during application. Through massage the patient benefits from an increased blood flow and warming of the region at the cellular level for better absorption of the Biofreeze Pain Relieving Gel. This hands on application also reinforces patient touch which has been shown to be very important in the healing cycle. If the Health Care Professional is working a joint area this allows for working with ROM movement during application.

Patient size:

- 4 oz tube

Professional sizes:

- 16 oz Gel pump
- 32 oz Gel pump
- 128 oz Gel pump (gallon)

Spray

The new Spray is specially formulated with natural menthol, MSM, Ilex and a new blend of botanical ingredients, Arnica, Calendula, Chamomile, Echinacea, Juniper Berry, and White Tea.

The new formula provides improved performance and longer lasting pain relief for those hard-to-reach areas, such as the middle back and lower extremities.

With the introduction of the new Spray formula, we've added a new 2 oz. bottle size which is air travel-friendly and conveniently fits into purses, carry-on luggage, and gym bags. Our new Spray is still available in the 4 oz. patient/client/consumer size for Home Care and a 16 oz. professional size for in-clinic treatments. The Biofreeze Pain Relieving Spray is the perfect Blending of Science & Nature.

Patient size:

- 2 oz Spray
- 4 oz spray

Professional size:

- 16 oz spray

Roll-On

Biofreeze Pain Relieving Roll-On affords a number of unique features that can enhance the effectiveness and convenience of this application process. The roller application allows the Health Care Professional or patient to apply the product without getting product on their hands. This can be most convenient for the older patient in applying product to hard to reach places or for someone in the workplace who must apply product during the workday. The roller application is also very beneficial in stimulating trigger points either through treatment in the office or with instruction to the patient on self-massage of these points.

The roller application is also a convenient and sanitary means to apply Biofreeze to a patient prior to ultrasound. To continue care the patient can take the Roll-On home.

Patient size:

- 3oz. Roll-On

Gravity Feed Dispenser

Contains 100 5-gram trial packets of Biofreeze Pain Relieving Gel. Individual application packets give your patients the opportunity to try this wonderful product.

They can benefit from increased blood flow and warming to the region by massaging the Biofreeze Pain Relieving Gel into the affected area. Once they use the sample they will want to purchase Biofreeze Pain Relieving Products.
