

PRESSOMED

PRESSURE THERAPY

Pressure therapy is a therapeutic massage which helps fighting oedemas and improves blood circulation thanks to the application of a pressure.

This pressure is applied in a sequential order to treat the inferior limbs suffering from oedema, water retention and circulatory problems.

Pressure therapy acts on blood and lymphatic circulation helping it be more efficient and improving aesthetic blemishes such as cellulite, water retention, etc.

THERAPEUTIC ACTIONS

- circulatory insufficiency
- lymphatic stasis
- Hydro-lipodystrophy (cellulite)
- Lymphoedema
- reactive cutaneous fibrosis
- Hard oedema
- Post operative troubles
- Hypotonia.

- Internal polyurethan air chambers
- Fastening with velcro
- ACC334 - GC9S

9 sectors kit-point for the treatment of inferior limbs, professional model.

GC9 PRO differs from GC9 thanks to the use of air chambers made of rubber; which allow pressure therapy to have a more efficient action and, being more flexible than those normally used, they adhere to each sector perfectly.

The Kit is made up of:

- 2 kit points for lower limbs with 6 sectors each
 - I inguinal sector
 - I stomach kit point with 2 sectors
- Internal rubber air chambers
- Fastening with velcro
- ACC693

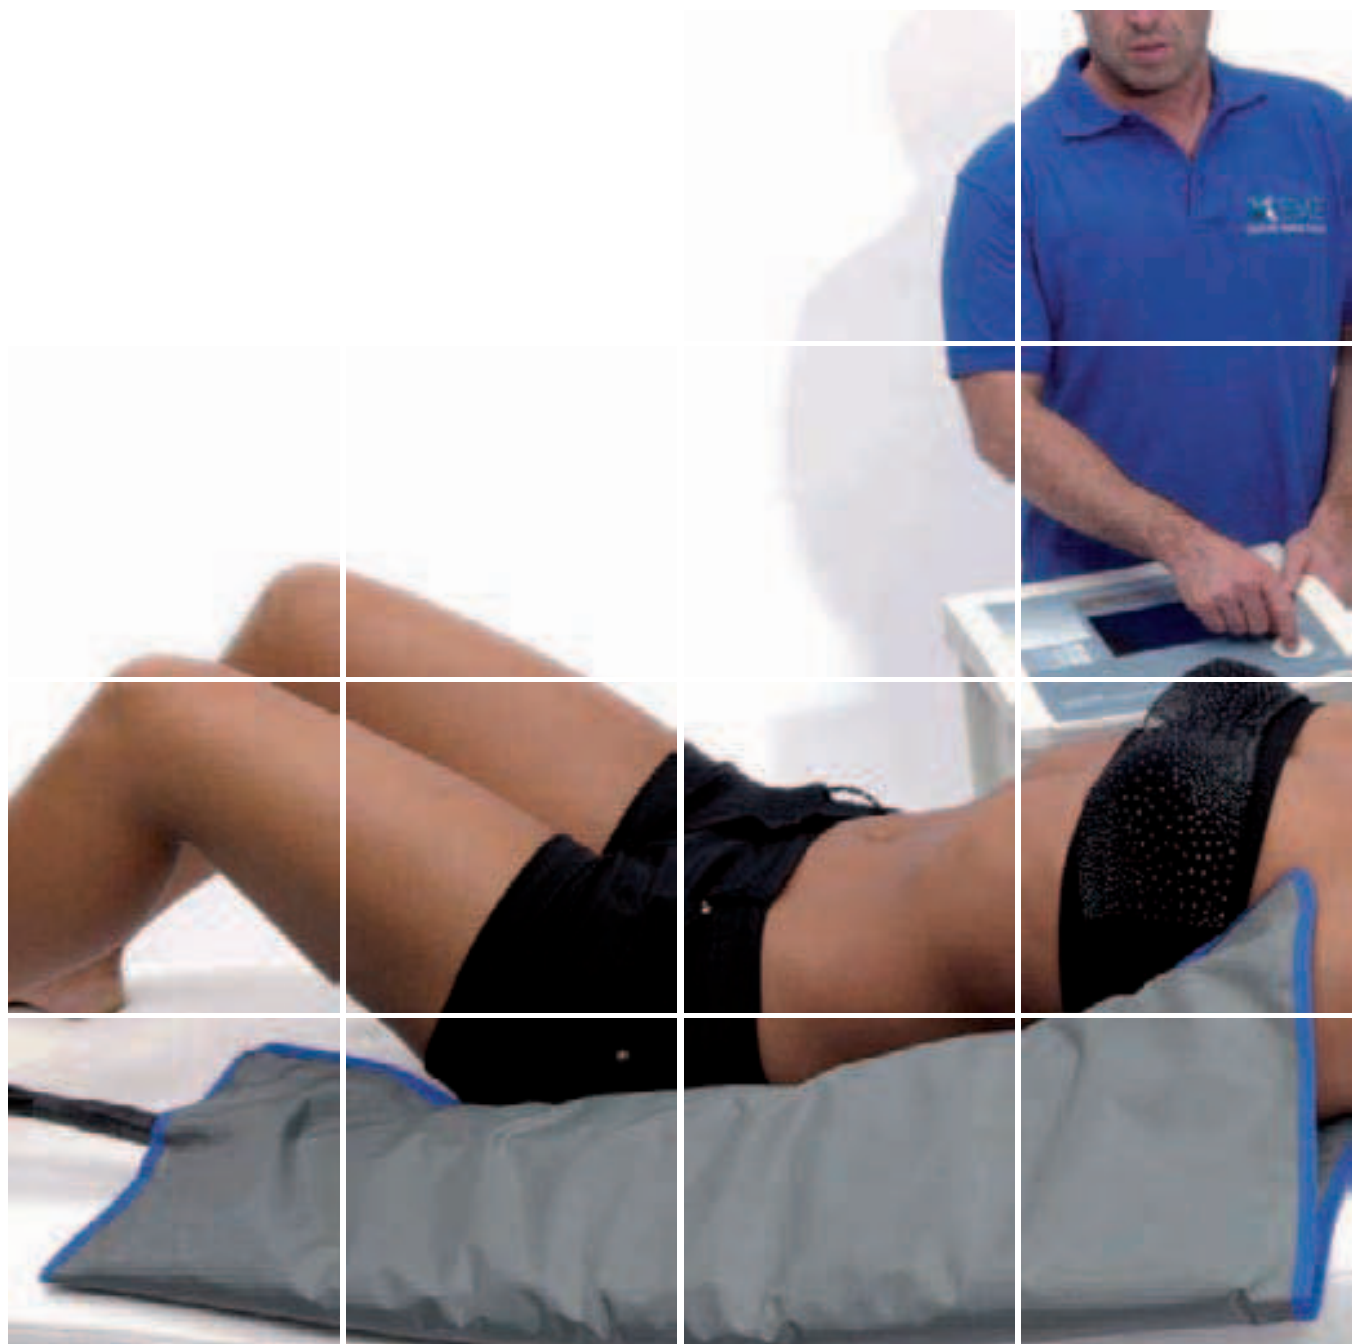

Kit-point for upper limbs with 7 sectors, conceived for post-mastectomy applications
